

ABSTRACT OF THE INVENTION

1 A latching system for a double-hung window including upper latches
2 and anti-bow latches where the upper latches and the anti-bow latches are
3 operated by a common activating mechanism for ease of use of the window.
4 A single activating mechanism may be utilized for latches on both sides of a
5 window, or separate activating mechanisms may be used for each side of the
6 window.
